

Spring is around the corner!

We are getting our school garden ready.

We are keen on **SUSTAINABILITY**: Wilf has built a garden bench out of an old pallet. Kurtis has designed a sign for our upcycling centre.

The bench is not only sustainable, it is also very comfortable. All the visible joints are made using dowels for great aesthetics!

We want to increase the **biodiversity** in our garden. Insects are very important in the food chain and help with keeping the balance in the ecosystem of our garden.

Tia and Kurtis have been building bug hotels and bug castles.
